	No Load

Portfolio Statistics (3 Yr.)

Alpha	-0.35
Average Effective Duration	5.57
Information Ratio	-0.98
SEC Yield	2.35%
Sharpe Ratio	0.02

Credit Quality (%) as of 09/30/18

AAA	56.56%
AA	8.19%
A	7.34%
BBB	22.33%
BB	1.54%
B	0.28%
NR	3.76%

Ratings are based on S&P and Moody's ratings. For securities rated differently by the rating agencies, the higher rating will apply. Ratings are subject to change and apply to the credit worthiness of the issuers of the underlying securities and not to the fund or its shares. Ratings range from AAA to D, with AAA being the highest quality and D the lowest, according to S&P. Bonds rated BBB and above are considered Investment Grade while bonds rated BB and below are considered Speculative Grade.

Fund Overview

Credit Research
Credit research focuses on both quantitative and qualitative analysis, including cash flow and debt coverage analysis, security valuation, industry trends, and quality of company management.

Market Research
Market research encompasses U.S. and global economic trends and technical analysis of the fixed income markets.

Risk Management
Risk management includes a focus on ensuring sufficient diversification among broad sector groups as well as individual credit issuers.

Morningstar rates funds based on enhanced Morningstar risk-adjusted returns.
Effective Dec. 10, 2012 the Core Bond Fund changed its primary strategy of investing in high-yield bonds to investing in investment-grade bonds. All data above prior to 12/10/2012 reflects the old strategy.

Economic Review

For the first quarter of 2018, U.S. Gross Domestic Product (GDP) growth registered 2.0%. Retail sales were particularly weak in the first two months of the calendar year, a key factor in keeping growth rates slower than the 2.9% GDP growth rate of the fourth quarter of 2017. However, retail sales then picked up considerably in March, April and May 2018, leading economists to forecast second quarter GDP growth to be considerably stronger, possibly reaching an annualized growth rate of 3.8% or more. The U.S. labor market remained healthy throughout the semi-annual period, as job gains averaged 214,000 per month, higher than the 188,000 monthly average for the year 2017. Unemployment fell from 4.1% at the beginning of the calendar year to 4.0% in June 2018, the lowest level in more than 18 years. In the month of May 2018, U.S. unemployment actually achieved its lowest reading of the semi-annual period at 3.8%. Manufacturing also remained strong, with the most important measure, the ISM Manufacturing Survey, reaching its highest level in more than nine months. Because of this economic strength, inflation, which had been tame for so long, finally started to pick up, albeit modestly. Although average hourly earnings among U.S. workers did not increase, the broadest measure of inflation, which the Federal Reserve (the Fed) closely follows, i.e. the core Personal Consumption Expenditure price index, which excludes food and energy, rose from 1.5% in January 2018 to 2.0% on a year over year basis as of May 2018 (latest data available).

The modest uptick in inflation supported the Fed's tightening monetary policy. During the semi-annual period, the Fed increased its targeted federal funds rate twice—in March and June 2018—bringing it to a range of 1.75% to 2.00%. The Fed also signaled to investors that it would increase interest rates once or possibly twice more before the calendar year ends. While U.S. inflation had only increased modestly, Fed policymakers stated concerns about the low unemployment rate, which they believe may eventually push wages higher, driving the overall inflation rate even higher. The hikes in the federal funds rate mostly affected short-term fixed income securities, whose yields rose significantly during the semi-annual period. For example, the two-year U.S. Treasury note started the semi-annual period with a yield of 1.88% and ended June with a yield of 2.53%, an increase of 65 basis points. (A basis point is 1/100th of a percentage point.) Long-term fixed income securities fared somewhat better. The bellwether 10-year U.S. Treasury note began the semi-annual period with a yield of 2.40% and ended June with a yield of 2.86%, up 46 basis points.

The performance data quoted herein represents past performance and does not guarantee future results. *Market volatility can dramatically impact the fund's short term performance. Current performance may be lower or higher than figures shown. The investment return and principal value will fluctuate so that an investor's shares, when redeemed may be worth more or less than their original cost. Past performance data through the most recent month end is available at vlfunds.com or by calling 1-800-243-2729. The average annual returns shown above are historical and reflect changes in share price, reinvested dividends and are net of expenses. Investment results and the principal value of an investment will vary.*

Alpha
The alpha is calculated as the excess return of the fund relative to the fund's benchmark, and serves a measure of performance on a risk adjusted basis.

Mean
Mean represents the annualized geometric return for the period shown.

Sharpe Ratio
A statistical expression that measures the relative reward of holding onto risky investments. The higher the ratio, the greater potential for return for the same amount of risk.

Effective Duration
Reflects interest rate sensitivity of a security, taking into account any embedded options. The higher the duration, the more sensitive a security is to interest rate changes.

You should carefully consider investment objectives, risks, charges and expenses of Value Line Funds before investing. This and other information can be found in the fund's prospectus and summary prospectus, which can be obtained free of charge from your investment representative, by calling 800.243.2729, or by clicking on the applicable fund at www.vlfunds.com. Please read it carefully before you invest or send money.

** The Adviser and EULAV Securities LLC, the Fund's principal underwriter (the "Distributor") have agreed to waive a portion of their advisory and Rule 12b-1 fees and the Adviser has further agreed to reimburse certain expenses of the Fund to the extent necessary to limit the Fund's total annual operating expenses (other than those attributable to interest, taxes, brokerage and futures commissions, and extraordinary expenses not incurred in the ordinary course of the Fund's business) to 0.99% of the Fund's average daily net assets (the "Expense Limitation") through June 30, 2019. The Adviser and the Distributor may subsequently recover from the Fund reimbursed expenses and/or waived fees (within 3 years after the fiscal year end in which the waiver/reimbursement occurred) to the extent that the Fund's expense ratio is less than the Expense Limitation or, if lower, the expense limitation in effect when the waiver/reimbursement occurred. The Expense Limitation can be terminated or modified before June 30, 2019 only with the agreement of the Fund's Board. The Fund's performance would be lower in the absence of such waivers.*

Portfolio holdings are subject to change and should not be considered a recommendation to buy or sell securities. Current and future portfolio holdings are subject to risk.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three- year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
